## 5 step guide to Planting flowers

- 1) Water plants and soil before planting.
- 2) Work up the soil together with a fortified soil conditioner like Paydirt or Soil booster at 1 bag per 50 sq ft.
- 3) Plant at the correct depth; plant so the top of the root ball is visible after planting. Firm the soil around the root ball. This is important.
- 4) Water thoroughly after planting ( 20-45 minutes)
- 5) A 1/2" mulch of Gold Rush or Fir Mulch over the soil will keep the soil moist, roots cool and prevent weeds.
